PROFESSIONAL SUMMARY

Senior iOS & React Native Developer with 13+ years of professional software development experience, with core expertise in native iOS development (Swift, Objective-C, SwiftUI) alongside React Native, React.js, and JavaScript/TypeScript for consumer-facing mobile applications. Proven track record building and shipping 50+ production mobile applications across fintech, e-commerce, on-demand services, and consumer growth domains. Experienced integrating REST APIs, real-time features, and backend services (Node.js, .NET Core) into scalable component-based architectures. Skilled in CI/CD workflows, automated testing (unit, integration, end-to-end), and cross-functional collaboration with product, design, and engineering teams to iterate quickly and drive user engagement.

CORE SKILLS

Languages: Swift, Objective-C, TypeScript, JavaScript, C#, Python

Mobile: React Native, React.js, Redux, React Navigation, React Query, Component-Based Architecture, iOS (SwiftUI, UIKit), Android, Core Data, SQLite

Backend & APIs: Node.js, REST APIs, GraphQL, .NET Core, EF Core, PostgreSQL

Real-Time & Integrations: Socket.IO, WebSockets, Firebase, Push Notifications, Payment Gateways (Stripe, PayPal, Square, Apple Pay), Sign in with Apple, Deep Linking (Branch.io), Analytics (Mixpanel)

Engineering Practices: AI Integration (LLM APIs; working knowledge of RAG and Vector Search), Core ML, Mapbox SDK, Team Leadership, Client & Stakeholder Management, CI/CD (GitHub Actions), Unit/Integration/End-to-End Testing, Git, Agile/Scrum, Performance Optimization, Cross-Functional Collaboration

PROFESSIONAL EXPERIENCE

Director / iOS, React Native & Full Stack Developer — Ravenous Technology

2015 – Present | Ahmedabad, India (Remote — International Clients)

- Design and develop cross-platform mobile applications using React Native and native iOS (Swift/SwiftUI), building component-based, reusable UI architectures for consumer-facing products.
- Use Redux for global state management, React Navigation for app routing, and React Query for server-state/data-fetching layers across React Native applications.
- Architected and built a two-sided technician booking marketplace app in React Native with a .NET Core backend, covering booking, matching, and real-time service management flows.
- Integrate REST APIs and backend services (Node.js, .NET Core) into mobile applications, collaborating directly with backend engineers to ensure seamless frontend-backend data flow.
- Built real-time, customer-facing features — live chat (LinkMe, WeTrade) and geofenced location-sharing (Simply Golf AI, Colectivo Coffee, and other client apps) — using Socket.IO/WebSockets, deployed across 10+ production applications.
- Delivered and maintained 50+ production mobile applications across fintech, marketplace, on-demand services, and consumer growth domains, each shipped end-to-end from design to App Store/Play Store release.
- Implemented CI/CD (GitHub Actions) workflows and release pipelines for iOS and Android builds, including TestFlight distribution and store deployment.
- Integrated payment gateways and in-app purchases (Stripe, PayPal, Square, Apple Pay, StoreKit) across 10+ applications — including Colectivo Coffee, LinkMe, Simply Golf AI, and WeTrade — plus Sign in with Apple, deep linking (Branch.io), and analytics (Mixpanel, Firebase) to support growth and monetization features.
- Created reusable architecture templates and coding standards that improved team development speed by 30%.

- Lead and mentor a team of developers; own client relationships, technical scoping, and project delivery timelines for international clients.
- Currently integrating LLM APIs into client applications to enable natural-language search over internal data, with working knowledge of Retrieval-Augmented Generation (RAG) and vector search approaches.

Junior iOS Developer — Webplanex

2014 – 2015

- Delivered 5+ iOS applications as part of a 25–35 person engineering team, building foundational experience in the full mobile software delivery lifecycle.
 - Collaborated with senior engineers and clients on feature implementation, testing, and bug resolution in a fast-paced agile environment.
-

SELECTED PROJECTS

- **LinkMe** — Cross-platform networking app (180+ countries) with custom real-time chat, media galleries, location-based user suggestions, Sign in with Apple, and Apple Pay for in-app purchases.
 - **Find Cart Girl Business** — Live location-sharing app with geofencing, background location updates, and Google Maps integration for real-time service tracking.
 - **Simply Golf AI** — Voice-driven mobile assistant using on-device intent classification (Create ML), speech-to-text, and geofenced, location-aware responses.
 - **Colectivo Coffee** — Ordering app with drive-through/table order flows, online payments (including Apple Pay), wallet integration, and Sign in with Apple.
 - **Mzad Qatar** — Most-downloaded app in Jayesh's portfolio; classifieds/marketplace app for buying and selling, built in Objective-C/Swift with one-to-one Firebase chat and Core Data-backed navigation.
 - **Insight Timer (Australia)** — Meditation and sleep app; contributed as a developer on the iOS team, including download/offline handling for meditation programs and in-app purchase plans.
 - **Bensinpris** — iOS app (Swift/SwiftUI) with Firebase Authentication supporting Sign in with Facebook, Google, and Apple, plus Mapbox SDK integration for location-based features.
-

EDUCATION

Master of Science (IT & C.A.) — Saurashtra University, 2013

Post Graduate Diploma in Computer Applications (PGDCA) — Saurashtra University, 2011

Bachelor of Commerce (B.Com) — Gujarat University, 2010
